

# **COBLO Initiative**

The Content Blockchain initiative is an **open, decentralized and non-profit consortium** of media innovators.

## **COBLO Infrastructure**

The Content Blockchain infrastructure is a decentralized, hybrid public-permissioned blockchain network tailored to the specific needs of the creative communities.

## **Benefits**

### > Open Technology

Open source software to empower and engage developers and start-ups

#### > Open Governance

Community-driven, decentralized on-chain governance model ensuring participation and network transparency

#### > Proof-of-Unique-Identity

Sustainable and environmentally friendly consensus algorithm (Green Mining)

#### > Scalability

Up to **10.000 items per second** and off-chain data streams

#### > Interoperability

Using chain agnostic open standards

### > Open Participation

**Democratising digital distribution and licensing** of quality content for the benefit of creatives and consumers

## > Regulatory Compliance

Technological solution for **compliance with EU directives** and regulatory frameworks

#### > Open Standards

Developing open standards for content identification, content licensing and attribution

## Use cases

Timestamping and notarization of content

**Certification of documents** 

Attestation of content ownership

Validation of content integrity

Search and discoverability

Digital media content licensing

# Leveling the Playing Field

### > Pro Creatives

Creative individuals will **regain control of content distribution** and licensing terms

## > Pro User

Self-sovereign identity will establish **true digital ownership** and avoid vendor lock-in

#### > Pro Competition

COBLO will **open the market** for new entrants and new business models

## Standardization

The ISCC – International Standard Content Code has been proposed by DIN NA 009-00-09 AA and accepted by ISO as as PWI in TC 46/SC 9/WG 18 (Digital-Content-Based Identification)
